GuidePort Active Antenna Module
GP AM 3000
Cat. No. 04899
Description

The GP AM 3000 active antenna module serves to transmit the audio programmes from the GuidePort cell transmitter to the visitors' receivers. Each programme, for example English tour for children or French tour for adults, needs its own antenna. You can connect up to two antennas to one cell transmitter via data cable. The data to be transmitted is selected on the antenna module.

Features

- Transmission of one audio programme per antenna module
- Data signal can be routed to a second antenna unit
- Antenna module may be located at a distance of up to 150m from the cell transmitter
- Power supply via the cell transmitter
- Optional connection of a directional antenna via SMA connector (RF Out)

Technical data

| | |
|-------------------------------|------------------------------|
| Frequency | 2,4 - 2,485 GHz |
| Frequency setting | 864 kHz / step |
| Modulation | FSK - Frequency Shift Keying |
| ERP, effective radiated power | 10 mW / USA 1 mW |
| Pick-up pattern | omni-directional |
| Antenna connector | RJ 45 |
| Dimensions | 114 x 84 x 32 mm |
| Weight | 144 g |

Delivery includes

1 GP AM 3000 active antenna module
